LED Lite Mat

LED Lite Mat is a range of low profile modules, designed to illuminate graphics, retail displays, interior & exterior signage, and many other lighting applications.

The construction consists of SMT surface mounted LEDs, bonded to an aluminium substrate in a matrix pattern, and then coated with a soft silicon polymer for durability and ease of cleaning.

There are three standard panel sizes available, utilising two types of SMT LED, for standard or high brightness applications. The choice of LED will depend on the light intensity required for the application.

The use of a semi rigid aluminium substrate also permits the LED panels to be formed into gentle curves if required.

Features:

- High Brightness
- Low Energy
- Long Life
- 3000K,4000K,6000K & RGB LEDs
- Plug & Play installation
- Durable & waterproof IP67
- 12v DC low voltage supply
- Dimmable

A full range of 12v DC power supplies are available.

White or Black silicon polymer coated finish.

Custom sizes are also available to order.
